

Battery backup

For anyone who experiences power outages, uses their desktop computer to work on important documents or wants to protect their computer against potential damage from voltage spikes, we recommend having a UPS (uninterrupted power supply) installed. A UPS will protect you against power fluctuations and give your computer backup power in the event of power outages.

Solution 1 - \$125*

- 550VA APC UPS
- Provides approximately 12 minutes of backup power**
- Auto shutdown software
- Installation and configuration

Solution 2 - \$219*
